SYCA

SYCA SOLUTION PTY LTD

Company Overview

Syca Solution Pty Ltd is an Australian-owned equipment solutions provider servicing mining, civil, and infrastructure operations throughout Western Australia and the Northern Territory.
The company specialises in equipment integration rather than simple supply, combining global OEM partnerships, in-house engineered product systems, local service capability, and technology development to deliver operationally reliable, site-ready solutions.
Syca Solution is the exclusive authorised dealer for SDLG equipment in WA and NT, providing end-to-end support including equipment supply, commissioning, operator handover, maintenance, and spare parts management.

In parallel, Syca Solution is the owner and developer of the RR product range, representing the company' s internal engineering and system integration capability. RR systems are designed, configured, and supported locally to suit Australian materials, duty cycles, environmental conditions, and remote-site constraints.

Core Services and Capabilities

- OEM Equipment Representation
- Exclusive SDLG dealership for WA & NT
- Excavators, loaders, and attachments
- Local commissioning, servicing, and OEM-aligned support
- In-house Engineered Systems – RR Series
- Mobile crushing plants
- Mobile screening plants
- Hydraulic rock breakers
- Modular system integration for site-specific applications
- Equipment engineered for Australian mining and civil duty cycles
- Mobile Crushing & Processing Solutions
- Heavy-duty mobile jaw crushers and screeners
- Quarry, demolition, and recycling applications
- Site configuration and operational support
- Power & Site Infrastructure
- Solar-powered trailer-based energy systems
- Mobile lighting towers
- Integrated mobile site offices
- Trailer-mounted Starlink communication systems
- Designed for remote, temporary, and off-grid operations
- Spare Parts & Asset Support
- Strong local spare parts inventory across OEM and RR systems
- Fast-response maintenance and technical support
- Downtime reduction through local availability

Technology & R&D Capability

Syca Solution maintains an internal Research & Development function focused on improving safety, efficiency, and operational visibility in remote environments.

Key focus areas include:
Remote and semi-autonomous operation of construction and mining equipment
Real-time equipment data acquisition and condition monitoring
AI-based analytics platforms for performance optimisation and asset management
This capability enables Syca to move beyond equipment supply into operational systems and technology-enabled solutions.

Our Values

Reliability – Equipment ready to work when you are
Efficiency – Stock on hand, quick setup, and responsive service
Safety – Commitment to safe operations and durable designs
Customer Focus – Flexible solutions tailored to your projects
Sustainability – Supporting recycling and environmentally responsible practices

Value Proposition

Local Australian ownership and accountability
Exclusive OEM backing combined with in-house engineering
Equipment and systems designed for remote WA & NT conditions
Strong spare parts availability and service responsiveness
Technology roadmap aligned with future mining operations
